

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claim 1 (currently amended): A remote control system ~~including~~ comprising:

a transmitter; and

a movingmovable machine remote-controlled on the basis of a control signal transmitted from the transmitter, and discriminating at least one combination of the transmitter and the movingmovable machine to be controlled by the transmitter on the basis of first identification information transmitted from the transmitter.

wherein the remote control system comprises a recording medium having characteristic information associated with the moving machine recorded thereon,

the transmitter comprises:

a characteristic information recognition device ~~capable of~~for recognizing the characteristic information concerning the ~~moving~~movable machine to be controlled, recorded on the recording medium; and

a second identification information transmission device for transmitting second identification information, which specifies the movingmovable machine as a ~~moving~~ machine to be controlled on the basis of the recognized characteristic information, and

the movingmovable machine comprises:

a discrimination device for determining whether remote control conducted by the transmitter that has transmitted the second identification information is allowed, on the basis of the received second identification information; and

a remote control prohibition device responsive to discrimination that the remote control is not allowed, for prohibiting the remote control by the transmitter that has transmitted the second identification information, irrespective of whether the combination based on the first identification information is established.

other transmitter is the transmitter to control the ~~moving~~movable machine on the basis of the first identification information.

Claim 8 (currently amended): The remote control system according to claim 7, wherein the ~~another~~ transmitter excluding device disables the remote control conducted by the ~~another~~other transmitter, by using information based on transmission timing of the control signal transmitted by the transmitter.

Claim 9 (currently amended): The remote control system according to ~~any one of claims 1 to 8~~claim 1, wherein

the characteristic information comprises information concerning control laws characteristic to the ~~moving~~movable machine associated with the characteristic information, and

the transmitter comprises a control signal transmission device for creating a control signal based on the control laws and transmitting the created control signal.

Claim 10 (currently amended): A ~~moving~~movable machine moved by a control signal supplied from a transmitter, which is combined with the ~~moving~~movable machine on the basis of first identification information, the ~~moving~~movable machine comprising:

a recording medium having characteristic information of the ~~moving~~movable machine itself recorded thereon;

a discrimination device responsive to transmission of second identification information based on the characteristic information transmitted from the transmitter that has recognized the characteristic information through the recording medium, for determining whether remote control conducted by the transmitter that has transmitted the second identification information is allowed, on the basis of the received second identification information; and

a remote control prohibition device responsive to discrimination that the remote control is not allowed, for prohibiting the remote control by the transmitter that has transmitted the second identification information, irrespective of whether a combination based on the first identification information is established.

Claim 11 (currently amended): The ~~moving~~movable machine according to claim 10, wherein the recording medium can be separated from the ~~moving~~movable machine.

Claim 12 (currently amended): The ~~moving~~movable machine according to claim 10-~~or 11~~, wherein the discrimination device determines whether the remote control conducted by the transmitter that has transmitted the second identification information is allowed, on the basis of information based on the characteristic information of itself and the received second identification information.

Claim 13 (currently amended): A transmitter ~~capable of~~for remote-controlling a ~~moving~~movable machine combined as a control object with the transmitter subject on the basis of first identification information, the transmitter comprising:

a characteristic information recognition device ~~capable of~~for recognizing characteristic information of the ~~moving~~movable machine recorded on a recording medium; and

a second identification information transmission device for transmitting second identification information, which specifies the ~~moving~~movable machine as a ~~moving machine~~ to be controlled, on the basis of the recognized characteristic information.

Claim 14 (currently amended): A remote control system ~~including~~comprising:

a transmitter and a ~~moving~~movable machine remote-controlled on the basis of a control signal transmitted from the transmitter,

wherein the remote control system comprises a recording medium having characteristic information associated with the ~~moving~~movable machine recorded thereon,

the transmitter comprises:

a characteristic information recognition device for recognizing the characteristic information associated with the ~~moving~~movable machine to be controlled; and
